Skyride Web and Mobile App Solution
Full-stack Developer
November 2021 - Present (3 years 8 months)
Philippines

Maintain and add new features on different websites using ReactJS, NextJS, NodeJS, Amplify, Laravel, MySQL, DynamoDB, Lamda, and Electron.

My roles on each website:

CTTP website - added Hero page and create download media feature. The media was uploaded from SharePoint and allowed users to download it on the site. I use Azure as an infrastructure.

Storm App - Create a web scrapping for the latest news and forecast. I used NodeJS, ReactJS, Electron, and Puppeteer as web automation APIs to get data.

Set Dialer - This is a website used to call clients/leads. This was purposely made for US insurance agents. It has a Dialer + CRM feature. My role is to maintain and add new features like Dialpad, voice recording, and mute options during the call. This is a pretty good website that can potentially be used for Call Centers. It was built with NextJS and AWS as an infrastructure.

Positive Review Machine - It was built with PHP(Laravel) and MySQL. I built 70% of the application. It is a very nice and unique application that is purposely made for business owners to reduce the bad reviews of their stores/ businesses. It could filter the bad feedback and store it in our system while good feedback will go directly on google to give the business very good reviews.

Livelihood App - It was built with React Native, Expo and AWS. It can be install on both Android and iOS. It was built for the purpose of helping small business owners sell there product to tourist and locals.

BBTrip App - It was also built with React Native, Expo and AWS as infrastructure. It was made to help tourist to book boats and car for there trip. It also eliminate the issue of overpricing fare on the area and help drivers to get bookings from tourist. It has a chat feature and real time tracking of trips.

Alturas Group of Companies
Web Developer
August 2018 - January 2019 (6 months)

I was assigned to build an application for HR Department. We built software for their franchise store employee. We used PHP, MySQL, JQUERY to build the project with Code Igniter as PHP framework.

TarShare
Graphic Designer
April 2017 - June 2017 (3 months)

Create amazing social media designs and layouts for tarpaulins and banners using Adobe Photoshop which was used for the marketing of the software
